## **DETAILED ACTION**

### ***Response to Arguments***

Applicant's arguments, see amendment, filed 5/4/2009, with respect to claims 3-10, 15-22 and 24 have been fully considered and are persuasive. The rejections of claims 3-10, 15-22 and 24 have been withdrawn.

### ***Allowable Subject Matter***

Claims 3-10, 15-22 and 24 are allowed.

The following is an examiner's statement of reasons for allowance:

Re claims 3-10, 15-22 and 24, claims 3-10, 15-22 and 24 would be subject to a provisional nonstatutory obviousness-type double patenting rejection in view of US 2006/0044422 (US application number 11/201,643). However, MPEP Section 804 states that "if a provisional nonstatutory obviousness-type double patenting rejection is the only rejection remaining in the earlier filed of two pending applications, while the later-filed application is rejectable on other grounds, the examiner should withdraw that rejection and permit the earlier-filed application to issue as a patent without a terminal disclaimer". In this case, the instant application 10/540,416 was filed 6/24/2005 which

Art Unit: 2622

was earlier than application 11/201,643 which was filed 8/10/2005. Therefore, in accordance with MPEP Section 804 a provisional nonstatutory obviousness-type double patenting rejection in view of US 2006/0044422 (US application number 11/201,643) is not being made because the instant application 10540,416 was filed earlier than application 11/201,643.

Re claims 3-10, the prior art fails to teach or suggest, “An image capturing apparatus comprising: **an area detection unit configured to detect, on the basis of a captured image of an object photographed based on pre-light emission prior to a main light emission, an edge in the captured image of the object to determine an area occupied by a predetermined shape defined by the edge in the captured image of the object**; a light control area setting unit configured to set a light control area of a light emitting unit in the captured image in accordance with the area determined by said area detection unit; an arithmetic unit configured to calculate a main light emitting amount in the main light emission **in accordance with a photometry value based on the pre-light emission** in the light control area of the captured image of the object; and a control unit configured to control to photograph the object in the main light emission by controlling the light emitting unit on the basis of the main light emitting amount calculated by said arithmetic unit”.

Re claims 15-22 and 24, the prior art fails to teach or suggest, “A method of controlling an image capturing apparatus, comprising: **an area detection step of**

Art Unit: 2622

**detecting, on the basis of a captured image of an object photographed based on pre-light emission prior to a main light emission, an edge in the captured image of the object to determine an area occupied by a predetermined shape defined by the edge in the captured image of the object;** a light control area setting step of setting a light control area of a light emitting unit in the captured image in accordance with the area determined in said area detection step; an arithmetic step of calculating a main light emitting amount in the main light emission **in accordance with a photometry value based on the pre-light emission** in the light control area of the captured image of the object; and a control step of controlling to photograph the object in the main light emission by controlling the light emitting unit on the basis of the main light emitting amount calculated in the arithmetic step".

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
